Confinement and Magnetic Fields

Monday, 1 August 2016 17:25 (2h 5m)

One of the greatest achievement of lattice QCD is the numerical determination of the confinement potential between pairs of static quarks, as well as the measurement of the shape of the color-flux tube connecting them. In this talk I will present how this is modified in the presence of a magnetic field.

Primary author: Mr SANFILIPPO, Francesco (University of Southampton)

Co-authors: Dr RUCCI, Andrea (University of Pisa and INFN Pisa); Dr BONATI, Claudio (Università di Pisa); D'ELIA, Massimo (University of Pisa and INFN); Mr MESITI, Michele (University of Pisa and INFN - Sezione di Pisa)

Presenter: Mr SANFILIPPO, Francesco (University of Southampton)

Session Classification: Poster session

Track Classification: Bulk properties of the quark-gluon plasma
