Beyond perturbative non-Gaussianity for primordial black holes 2211.08348; EPL **142**(4), 2023, 49001

Andrew Gow

NEHOP Naples, 19 June 2023

 Primordial curvature perturbation typically assumed to be Gaussian, but may not be

Andrew Gow	ICG Portsmouth	19/06/2023
Beyond perturbative non-G for PBHs	Non-perturbative non-Gaussianity	1/9

- Primordial curvature perturbation typically assumed to be Gaussian, but may not be
- \blacktriangleright PBHs form in tail of $P(\zeta),$ so non-Gaussianity can strongly affect them

Andrew Gow	ICG Portsmouth	19/06/2023
Beyond perturbative non-G for PBHs	Non-perturbative non-Gaussianity	1/9

- Primordial curvature perturbation typically assumed to be Gaussian, but may not be
- \blacktriangleright PBHs form in tail of $P(\zeta),$ so non-Gaussianity can strongly affect them

• Common to write
$$\zeta = \zeta(\zeta_G)$$

Andrew Gow	ICG Portsmouth	19/06/2023
Beyond perturbative non-G for PBHs	Non-perturbative non-Gaussianity	1/9

- Primordial curvature perturbation typically assumed to be Gaussian, but may not be
- \blacktriangleright PBHs form in tail of $P(\zeta),$ so non-Gaussianity can strongly affect them
- Common to write $\zeta = \zeta(\zeta_G)$
- ▶ Typically treated perturbatively (*f*_{NL}, *g*_{NL}, ...)

Beyond perturbative non-G for PBHs	Non-perturbative non-Gaussianity	1/9
Andrew Gow	ICG Portsmouth	19/06/2023

- Primordial curvature perturbation typically assumed to be Gaussian, but may not be
- \blacktriangleright PBHs form in tail of $P(\zeta),$ so non-Gaussianity can strongly affect them
- Common to write $\zeta = \zeta(\zeta_G)$
- ► Typically treated perturbatively (*f*_{NL}, *g*_{NL}, ...)
- Not sufficient for non-G in the far tail

Andrew Gow	ICG Portsmouth	19/06/2023
Beyond perturbative non-G for PBHs	Non-perturbative non-Gaussianity	1/9

- Primordial curvature perturbation typically assumed to be Gaussian, but may not be
- \blacktriangleright PBHs form in tail of $P(\zeta),$ so non-Gaussianity can strongly affect them
- Common to write $\zeta = \zeta(\zeta_G)$
- ► Typically treated perturbatively (*f*_{NL}, *g*_{NL}, ...)
- Not sufficient for non-G in the far tail
- Need to find a non-perturbative method

Andrew Gow	ICG Portsmouth	19/06/2023
Beyond perturbative non-G for PBHs	Non-perturbative non-Gaussianity	1/9

► Classical USR transformation $\zeta = -\frac{1}{3}\ln\left(1 - 3\zeta_G\right)$

Andrew Gow	ICG Portsmouth	19/06/2023
Beyond perturbative non-G for PBHs	Non-perturbative non-Gaussianity	2/9

► Classical USR transformation $\zeta = -\frac{1}{3}\ln(1 - 3\zeta_G)$

Doesn't include full effects

Andrew Gow	ICG Portsmouth	19/06/2023
Beyond perturbative non-G for PBHs	Non-perturbative non-Gaussianity	2/9

► Classical USR transformation $\zeta = -\frac{1}{3}\ln(1 - 3\zeta_G)$

- Doesn't include full effects
- Want general $P(\zeta_G) \to P(\zeta)$

Andrew Gow	ICG Portsmouth	19/06/2023
Beyond perturbative non-G for PBHs	Non-perturbative non-Gaussianity	2/9

Classical USR transformation

$$\zeta = -\frac{1}{3}\ln\left(1 - 3\zeta_G\right)$$

- Doesn't include full effects
- Want general $P(\zeta_G) \to P(\zeta)$
- Can do in general with CDF transformation:

$$F[\zeta(r), r] = F_G[\zeta_G(r), r]$$

Andrew Gow	ICG Portsmouth	19/06/2023
Beyond perturbative non-G for PBHs	Non-perturbative non-Gaussianity	2/9

▶ PBHs depend on compaction C, rather than ζ

Andrew Gow	ICG Portsmouth	19/06/2023
Beyond perturbative non-G for PBHs	Non-perturbative non-Gaussianity	3/9

- ▶ PBHs depend on compaction C, rather than ζ
- Additional non-linearity in this relation

$$C = C_l - \frac{3}{8}C_l^2, \quad C_l = -\frac{4}{3}r\zeta'$$

Andrew Gow	ICG Portsmouth	19/06/2023
Beyond perturbative non-G for PBHs	Non-perturbative non-Gaussianity	3/9

- ▶ PBHs depend on compaction C, rather than ζ
- Additional non-linearity in this relation

$$C = C_l - \frac{3}{8}C_l^2, \quad C_l = -\frac{4}{3}r\zeta'$$

▶ Need to get $P(C_l)$ to determine PBH properties

Andrew Gow	ICG Portsmouth	19/06/2023
Beyond perturbative non-G for PBHs	Non-perturbative non-Gaussianity	3/9

Compaction probability

• Bivariate Gaussian P(X, Y)

$$X = r\zeta'_G, \quad Y = \zeta_G$$

Andrew Gow	ICG Portsmouth	19/06/2023
Beyond perturbative non-G for PBHs	Non-perturbative non-Gaussianity	4/9

Compaction probability

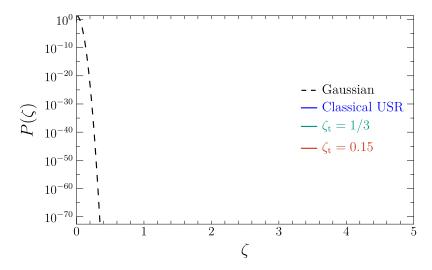

• Bivariate Gaussian
$$P(X, Y)$$

 $X = r\zeta'_G, \quad Y = \zeta_G$

• Compaction probability $P(C_l) = \int \mathsf{d}\zeta_G \frac{3}{4|\mathcal{J}_1(\zeta_G)|} P\left[-\frac{1}{\mathcal{J}_1(\zeta_G)} \left(\frac{3}{4}C_l + 2\Sigma_{XY}\mathcal{J}_2(\zeta_G)\right), \zeta_G\right]$ $\mathcal{J}_1(\zeta_G) = \frac{\mathsf{d}\zeta}{\mathsf{d}\zeta_G}, \quad \mathcal{J}_2(\zeta_G) = \frac{\mathsf{d}\zeta}{\mathsf{d}\Sigma_{YY}}$

► Non-Gaussianity can greatly enhance PBH formation

Andrew Gow	ICG Portsmouth	19/06/2023
Beyond perturbative non-G for PBHs	Conclusions	9/9

- ► Non-Gaussianity can greatly enhance PBH formation
- Perturbative treatment may miss deviations from Gaussianity in the far tail

Andrew Gow	ICG Portsmouth	19/06/2023
Beyond perturbative non-G for PBHs	Conclusions	9/9

- ► Non-Gaussianity can greatly enhance PBH formation
- Perturbative treatment may miss deviations from Gaussianity in the far tail
- Non-perturbative treatment can be used for any $P(\zeta)$

Andrew Gow	ICG Portsmouth	19/06/2023
Beyond perturbative non-G for PBHs	Conclusions	9/9

- ► Non-Gaussianity can greatly enhance PBH formation
- Perturbative treatment may miss deviations from Gaussianity in the far tail
- Non-perturbative treatment can be used for any $P(\zeta)$
- Transition between Gaussian and non-Gaussian behaviour is more important than the far tail

Andrew Gow	ICG Portsmouth	19/06/2023
Beyond perturbative non-G for PBHs	Conclusions	9/9

- ► Non-Gaussianity can greatly enhance PBH formation
- Perturbative treatment may miss deviations from Gaussianity in the far tail
- Non-perturbative treatment can be used for any $P(\zeta)$
- Transition between Gaussian and non-Gaussian behaviour is more important than the far tail
- Shallow tail in $P(\zeta)$ highlights divergence in mass distribution
