

Strategic Detector R&D Proposal

- European Strategy
 - Detector R&D Roadmap
 - PPTAP review
 - R&D proposal and outcomes
 - Questions and next steps
-
- May thanks due to Phil Allport, who led the R&D Roadmap process
-
- Executive summary
 - A broad programme of 'Strategic detector R&D' is planned at European level
 - Enthusiasm in the UK community to participate, but STFC position on funding is unclear
 - Application to the Infrastructure Fund rejected by PPAP and PAAP
 - Next steps are not obvious, but need to be taken quickly
 - DRD collaborations are being set up in the coming months

European Strategy

ECFA

European Committee for Future Accelerators

Detector R&D Roadmap

European Particle Physics Strategy Update

Main report: *“Recent initiatives with a view towards strategic R&D on detectors are being taken by CERN’s EP department and by the ECFA detector R&D panel, supported by EU-funded programmes such as AIDA and ATTRACT. Coordination of R&D activities is critical to maximise the scientific outcomes of these activities and to make the most efficient use of resources; as such, there is a clear need to strengthen existing R&D collaborative structures, and to create new ones, to address future experimental challenges of the field beyond the HL-LHC. Organised by ECFA, a roadmap should be developed by the community to balance the detector R&D efforts in Europe, taking into account progress with emerging technologies in adjacent fields.”*

Deliberation document: *“Detector R&D programmes and associated infrastructures should be supported at CERN, national institutes, laboratories and universities. Synergies between the needs of different scientific fields and industry should be identified and exploited to boost efficiency in the development process and increase opportunities for more technology transfer benefiting society at large. Collaborative platforms and consortia must be adequately supported to provide coherence in these R&D activities. The community should define a global detector R&D roadmap that should be used to support proposals at the European and national levels.”*

Contents

Table of Contents	i
Introduction	1
References Introduction	8
1 Gaseous Detectors	9
1.1 Introduction	9
1.2 Main drivers from the facilities	10
1.2.1 Muon systems	10
1.2.2 Inner and central tracking with particle identification capability	13
1.2.3 Calorimetry	18
1.2.4 Photon detection	19
1.2.5 Time of Flight Systems	21
1.2.6 TPCs for rare event searches	22
1.3 Recommendations	24
1.3.1 Key technologies	24
1.3.2 Common challenges	25
1.3.3 R&D environment and development tools	27
References Chapter 1	28
2 Liquid Detectors	37
2.1 Introduction	37
2.2 Main drivers from the facilities	40
2.3 Key technologies	42
2.3.1 Liquid Properties of Noble Liquids	43
2.3.2 Charge Collection in Noble Liquids	44
2.3.3 Purification, Cryogenics, Infrastructure and Integration for Noble Liquids	45
2.3.4 Light Collection in Noble and Other Liquids	47
2.3.5 Liquid Scintillator and Water Detectors	49
2.4 Observations	51
2.4.1 Neutrino Oscillation and Astro-particle Neutrino Detectors	51
2.4.2 Dark Matter and $0\nu\beta\beta$ Experiments	52
2.5 Recommendations	53
References Chapter 2	54
3 Solid State Detectors	57
3.1 Introduction	57
3.2 Main drivers from the facilities	59
3.3 Key technologies	62
3.3.1 CMOS sensors: MAPS and passive CMOS	62
3.3.2 Sensors for 4D-tracking	64
3.3.3 Silicon sensors for extreme fluence environments	66
3.3.4 Wide band-gap semiconductors	66
3.3.5 The future of interconnection technologies	68
3.3.6 Status and evolution of the simulation tools	70
3.4 Observations	71
3.4.1 Testing infrastructures	71
3.4.2 Industrialisation	72
3.4.3 Related fields	72
3.5 Recommendations	73
3.5.1 Detector R&D Themes	73
3.5.2 "Blue-sky" Research	75
3.5.3 Further recommendations on industrialisation	76
References Chapter 3	76
4 Particle Identification and Photon Detectors	79
4.1 Introduction	79
4.2 Main drivers from the facilities	80
4.3 Key technologies: particle identification	82
4.3.1 RICH detectors	82
4.3.2 Detectors for Internally Reflected Čerenkov light	85
4.3.3 Time of flight detectors	86
4.3.4 Particle identification through dE/dx and TRD	88
4.4 Key technologies: photon detection	89
4.4.1 Vacuum-based photon detectors	89
4.4.2 Gas-based photon detectors	91
4.4.3 Semiconductor photon detectors	92
4.4.4 Superconducting photon detectors	96
4.4.5 Novel optical materials for fibre trackers and light collection	97
4.5 Observations	98
4.6 Recommendations	99

5 Quantum and Emerging Technologies Detectors	105
5.1 Introduction	105
5.2 Theory Motivation	107
5.3 Quantum Methodologies and Techniques	111

CONTENTS

5.3.1 Clocks	111
5.3.2 Spin-based sensors for axions and axion-like-particles	112
5.3.3 Superconducting approaches	113
5.3.3.1 Dark matter searches with 3D microwave cavities	116
5.3.4 Optomechanical technologies	117
5.3.5 Atoms, molecules, ions and atom-interferometric probes	120
5.3.6 Metamaterials, low-dimensional materials, quantum materials	121
5.4 Observations and Prospects	123
References Chapter 5	124
6 Calorimetry	131
6.1 Introduction	131
6.2 Main drivers from the facilities	132
6.3 Key technologies	135
6.3.1 Silicon-based calorimeters	135
6.3.1.1 Challenges and requirements for future projects	135
6.3.1.2 Main R&D Directions	136
6.3.2 Calorimetry Based on Liquefied Noble Gases	137
6.3.2.1 Challenges and requirements for future projects	138
6.3.2.2 Main R&D Directions	138
6.3.3 Calorimetry Based on Gaseous Detectors	140
6.3.3.1 R&D needs for Gaseous Calorimeters	140
6.3.4 Calorimeters with light-based readout	141
6.3.4.1 State-of-the-art	141
6.3.4.2 Challenges and requirements for future projects	142
6.3.4.3 Main R&D directions	143
6.3.5 Precision timing in calorimetry	143
6.3.5.1 Use of timing information for enhanced calorimetric performance	144
6.3.5.2 R&D Needs	144
6.3.6 Readout Systems for Calorimetry	146
6.3.6.1 Breadth of challenges for calorimeter readout systems	146
6.3.6.2 Necessary ASIC developments	146
6.3.6.3 Discrete components for compact calorimeters	146
6.3.6.4 Connection technologies for large-area solid-state sensors	147
6.3.6.5 Readout integration and the new wave of FPGAs	147
6.4 Observations	147
6.5 Recommendations	148

Roadmap Content

ECFA

European Committee for Future Accelerators

Detector R&D Roadmap

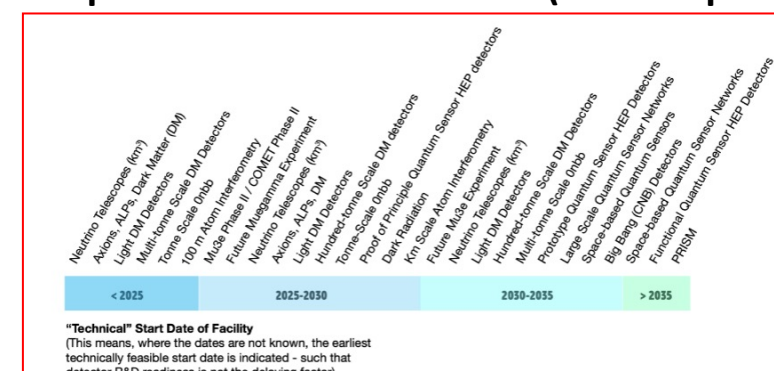

Roadmap process involved: 67 authors; 12 expert Input Session speakers; ECFA National Contacts; respondents to the Task Force surveys; 121 Symposia presenters; 1359 Symposia attendees as well as 44 APOD (Advisory Panel with Other Disciplines) Task Force topic specific contacts.

248 page report and 8 page synopsis document identifying the most urgent R&D topics or activities for meeting the EPPSU listed programme in the 9 Task Force Areas.

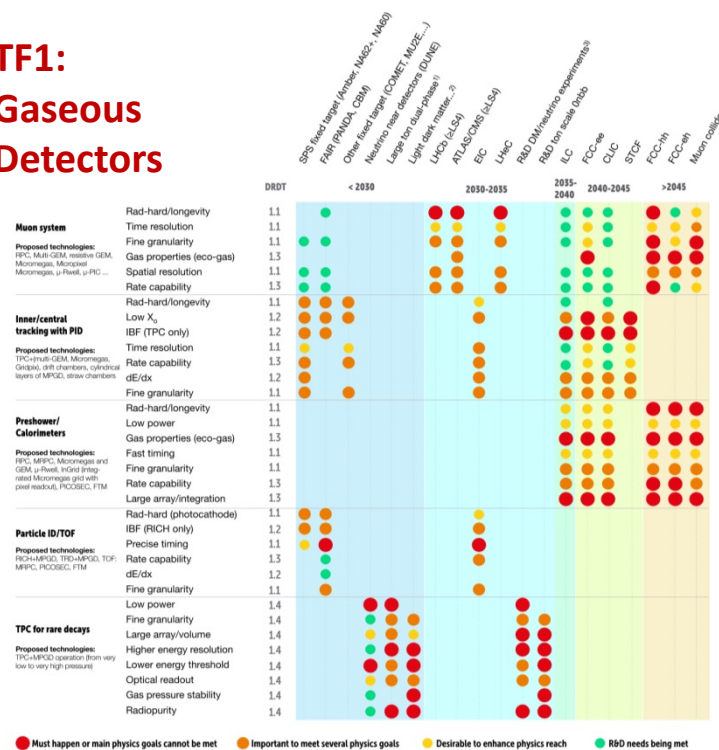

(<https://cds.cern.ch/record/2784893>)

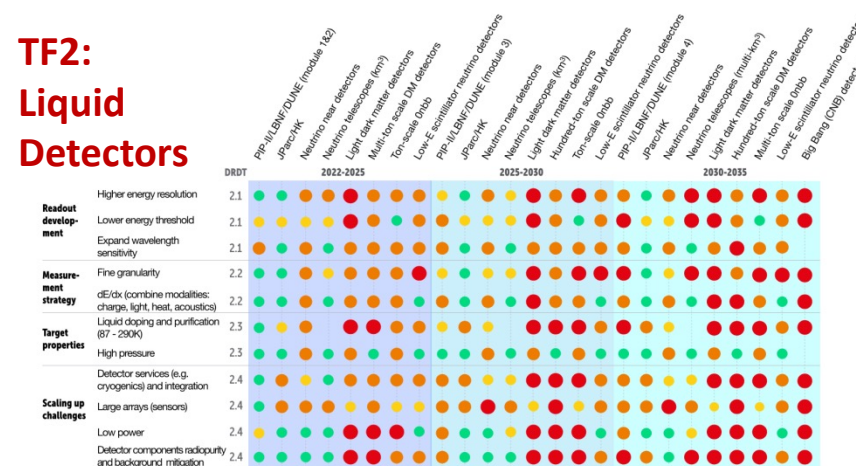

Example non-accelerator dates (not complete)

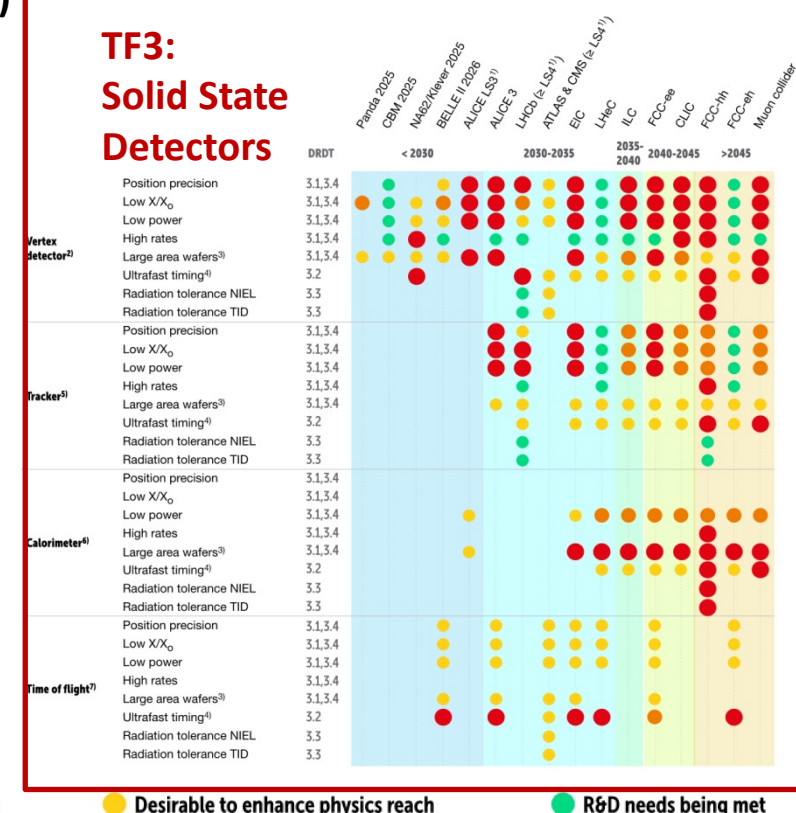

TF1: Gaseous Detectors

TF2: Liquid Detectors

TF3: Solid State Detectors

1) Large ton dual-phase (PandaX-4T, LZ, DarkSide-20k, Argo 200k, ARIADNE, ...)
2) Light dark matter, solar axion, Onbb, rare nucleon and astro-particle reactions, Bix tagging
3) R&D for 100-ton scale dual-phase DM/neutrino experiments

Must happen or main physics goals cannot be met

Important to meet several physics goals

Desirable to enhance physics reach

R&D needs being met

Outcomes – Broad Brush

- ▶ The new focus needs to be on ‘Strategic R&D’
- ▶ All varieties of R&D are needed to deliver projects
 - ▶ ‘Blue skies R&D’ (low TRL): new concepts, small demonstrators, small teams (with good support)
 - ▶ ‘Strategic R&D’ (mid TRL): developing systems and prototypes, investigating cost / performance, larger teams with involvement of industry
 - ▶ ‘Project R&D’ (high TRL): developing detector for specific experiments / applications, full collaborations with substantial funding, industry as suppliers
- ▶ Collective and coordinated work will be needed
 - ▶ Cost / scale / complexity is growing beyond the capacities of any group
 - ▶ Effective / efficient access to specialised tools and facilities is needed
- ▶ We need to begin ‘now’
 - ▶ Yes, this is ‘in tension’ with current construction projects
 - ▶ These projects will soon end their R&D phase and experts will naturally become available
 - ▶ A ramp-up rather than a big bang is needed
 - ▶ With tight resources, the value of a well-coordinated programme is manifest

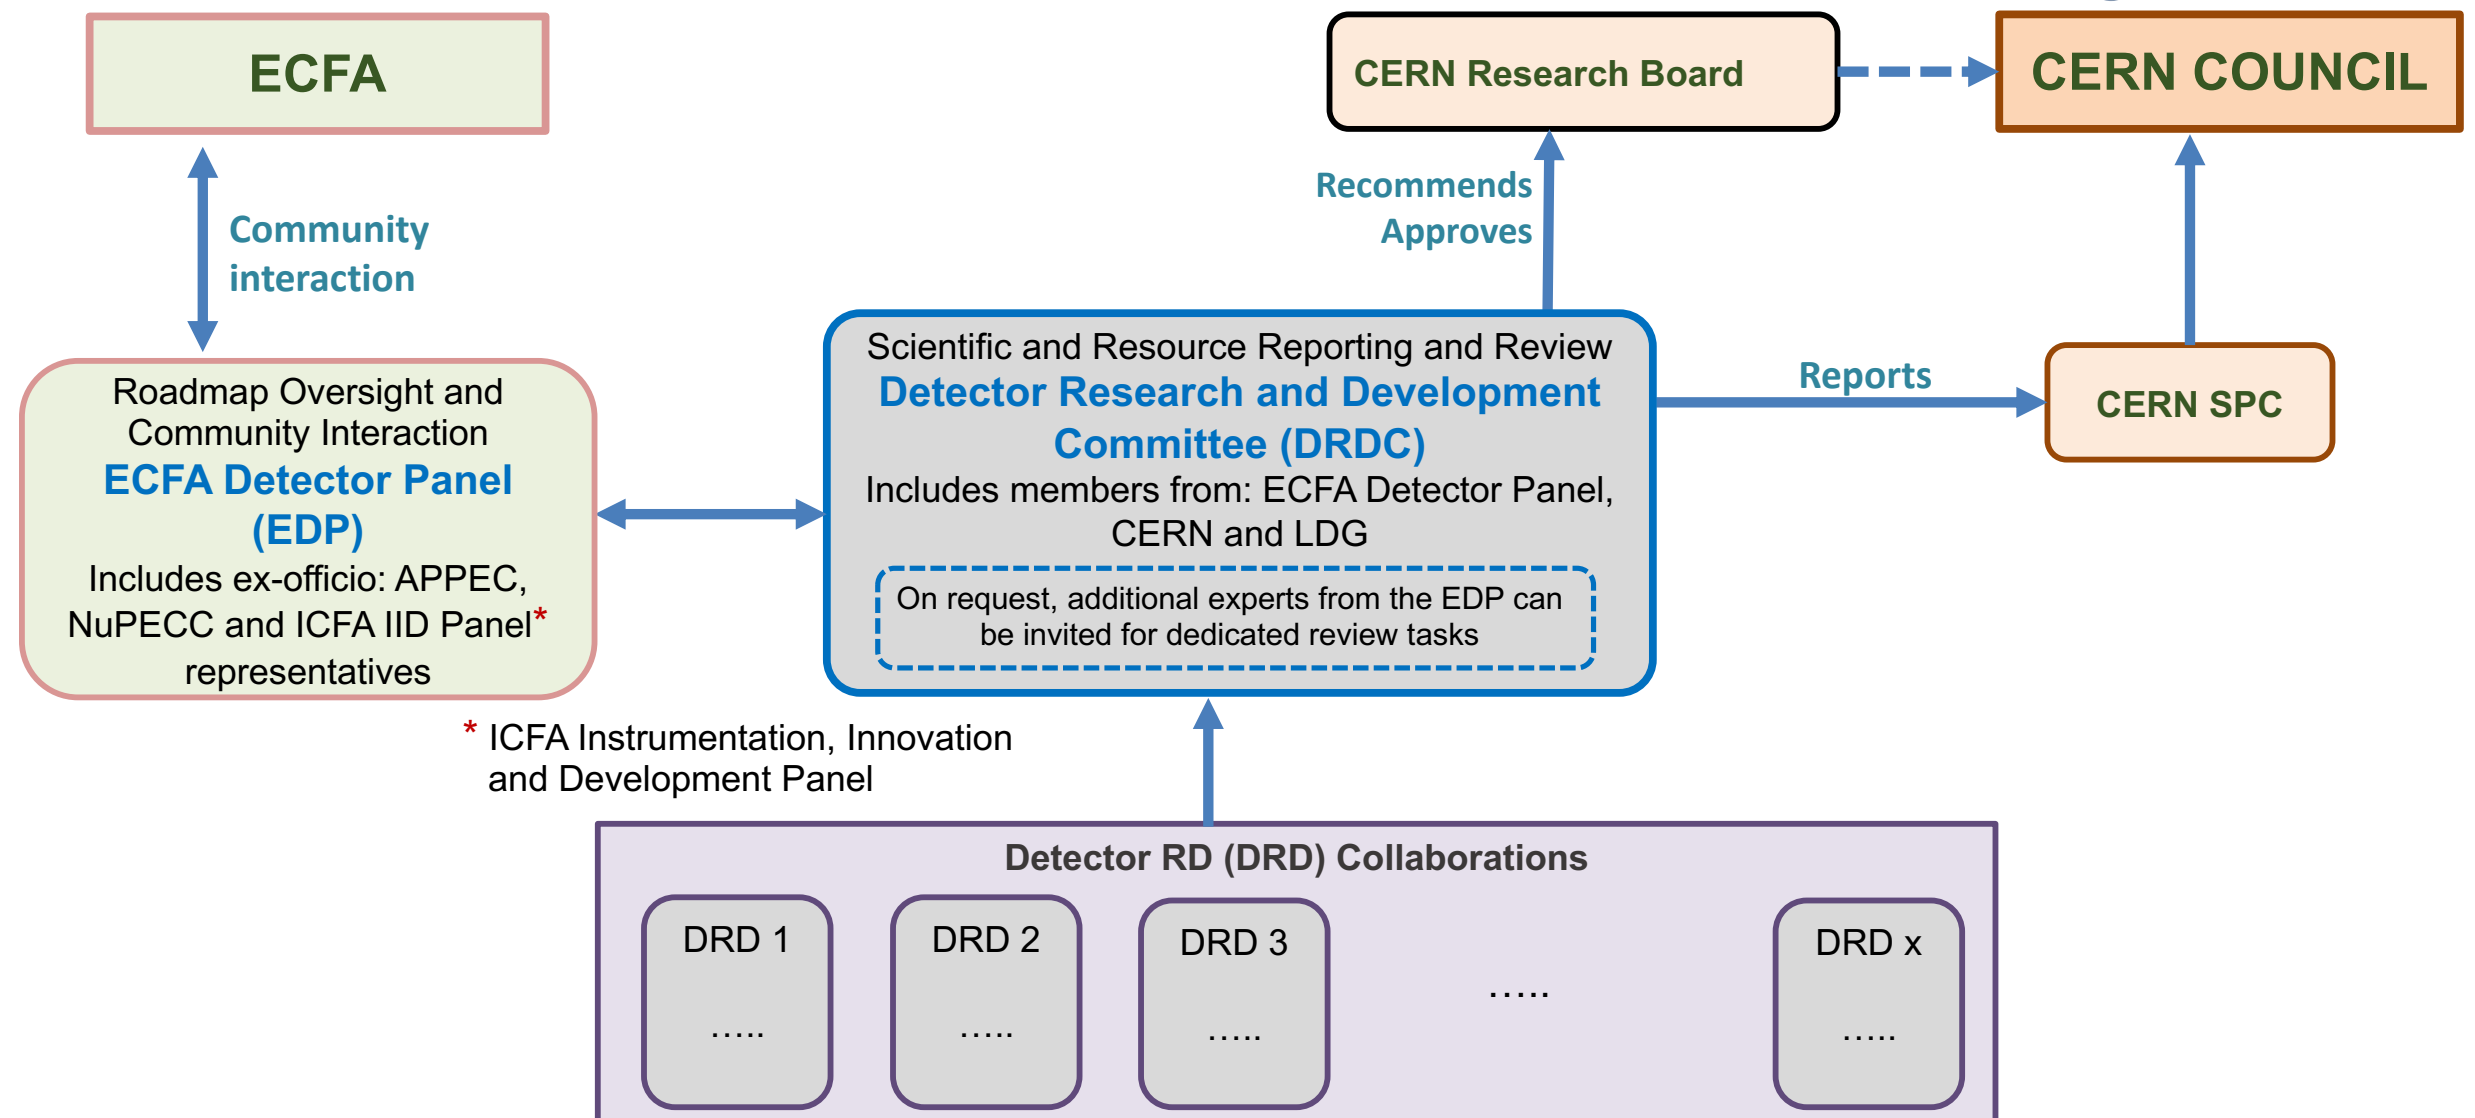

CERN DRD Collaborations

ECFA

European Committee for Future Accelerators

Suggested Implementation
and Review Organisation

7th September 2022

ECFA Detector R&D Roadmap

17

- ▶ DRD collaborations will be setup during 2023, begin work in 2024

PPTAP

- ▶ STFC set up an advisory panel to consider our response
 - ▶ Ably chaired by Paula Chadwick, ~12 particle physicists involved
 - ▶ “The purpose of the Particle Physics Technology Advisory Panel (PPTAP) is to ...produce a coherent UK position on the development of the R&D roadmaps related to the European Strategy for Particle Physics Update. ... the UK will benefit from a coherent and strategic approach to future R&D in these fields”
- ▶ Key recommendations
 - ▶ The UK must respond to complement the implementation of the ... R&D roadmaps by undertaking an STFC-funded programme of long-term ADSC technology R&D
 - ▶ A funded framework be implemented by STFC to both direct and respond to community and STFC requirements... with a selection of directed responsive mode funding opportunities available for HEIs, National Laboratories, and other PSREs, and encourage low-TRL co-development with industry.
 - ▶ Any funding ... should be in addition to funding allocated to current and future activities within the broader PP programme
- ▶ TAAB (on a par with Science Board, for Technology)
 - ▶ TAAB urges STFC to initiate a call in the coming months for R&D specifically targeted at the roadmaps and participating in European or global R&D programmes, aimed at (re)directing future funds (in-house and programmes directorate) in a more strategic manner.

What do the UK Roadmaps Say?

▸ PPAP

- Essential to have a **broad portfolio of projects** to efficiently balance R&D phases for future programmes from the dedicated production builds
- Maintaining a **balanced portfolio** is key to enabling technology and skills exchange
- The R&D activities relevant for the HL-LHC should serve as a basis for the detector development relevant for **future colliders**
- Investment in **appropriate R&D** on detector and accelerator technologies / systems ... will position us to take a **leading role** in e^+e^- collider physics
- Should maintain leadership during R&D, construction and exploitation of **Direct DM Detectors**
- STFC should facilitate **access to funding opportunities** for [basic R&D], where possible using external funding streams

▸ PAAP

- An effective and cost efficient mechanism could be to provide funding for **long-term technology development** in areas applicable to a larger number of the upcoming projects... **larger, technology-focussed grants** which could fund centres of excellence comprising either single or a **distributed network of institutes**.
- A new mode of **larger scale technology programmes** which would assemble expertise to develop high impact technologies with application across **multiple projects and fields**

What Happened Next?

- ▶ FCC and ILC meetings in ~July
 - ▶ Broad consensus that generic (strategic) R&D is a key part of the preparations for whichever collider project comes next
 - ▶ Agreement to construct a position paper
- ▶ Funding
 - ▶ Clear that to make an impact, funding at the £Ms per year is needed
 - ▶ Infrastructure Fund is the only current game in town for this type of funding
 - ▶ Decision to speculatively submit a proposal for an 'R&D programme' to the IF call
 - ▶ The fit to IF (which is usually for large capital projects) is not clear
 - ▶ We effectively asked PPAP and PAAP to make a judgement on that and provide feedback
 - ▶ Note that non-STFC Councils have received funding for 'research networks' that look quite different to our traditional projects
- ▶ Proposal is attached to the agenda
 - ▶ Draws somewhat on the PPDTC proposal of 2018
 - ▶ Around 60 authors, almost all UK institutes represented
- ▶ Result: **proposal rejected as an IF priority** by PPAP and PAAP 🤔
 - ▶ On reasonable grounds in both cases – not here to question the prioritisation decision
 - ▶ We have therefore missed Waves 3 / 4 of IF -> no funding from this source until 2025

R&D Proposal: Objectives

- ▶ Develop and sustain a world-leading **capability** for advanced detector technology R&D in the STFC research community
- ▶ Facilitate continued UK **leadership** in the European R&D programme, and subsequent resulting leadership in next-generation experiments
- ▶ Construct and support specialised **facilities** at UK institutes, supporting international capability in detector development
- ▶ Identify routes for rapid **application** of new detector technologies across national facilities, academic disciplines, and industry
- ▶ Support co-development of technologies with UK **companies**, leading to enhanced economic return from international investments
- ▶ Transform skills development, training and career prospects for technology-focussed **early career researchers** in STFC core science

R&D Proposal: Scope and Outcomes

► Scope

- Matched (in principle) to the scope of the European Roadmap
- Accepts that some prioritisation will be needed, but does not make recommendations on which R&D topics are the priorities
 - This is for peer review, look at a wide range of practical and strategic criteria
 - Clearly the question of focus and 'critical mass' comes into this – this is not PRD
- Explicitly covers both PP (collider, flavour, neutrinos) and PA (DM, quantum)
- Focussed on both people and the required facilities in labs and institutes

► Outcomes

- Proposals via the STFC Visions process for follow-up project R&D and construction of new instruments
- Supply of high-technology deliverables to international projects, either as UK buy in or via contracts
- Interdisciplinary proposals for application of technology in non-STFC areas, either via the UK's national facilities or within institutes
- Exploitation of IP within industry via licenses and other agreements
- Direct employment of trained people in industry.

R&D Proposal: Plan and Resources

▶ Three main threads

- ▶ A number of medium-scale R&D projects, within the context of the European Roadmap
 - ▶ i.e. facilitating and supporting UK leadership in the DRD collaborations
 - ▶ 'Medium scale' means £1M+ per year per project, sustained in the long term
- ▶ Funding stream explicitly for interaction with industry
 - ▶ Including development of a coherent and focussed 'offer' to UK industry
- ▶ Distributed CDT in detector technology and data-handling
 - ▶ CDT in the sense of cohort training and industry involvement; but across many institutes

▶ Resources

- ▶ Some new money is clearly needed to get going – estimate £3M pa
 - ▶ Note that we do NOT need money in the coming year other than travel, etc
- ▶ Since there are no new core-funded construction projects on the roadmap, addition resources will become available post-2026
- ▶ Estimate that a sustained level of £10M per year would allow UK leadership in targeted areas
- ▶ Note that other comparable countries are already spending far more than this
 - ▶ And planning additional investment in the context of the European Roadmap

UK Future Silicon R&D Workshop

- ▶ Ably convened by Laura and Jens... wide UK attendance
 - ▶ Genuine cross-section of the community from both universities and labs
 - ▶ <https://indico.stfc.ac.uk/e/UKTrackerRnD>

Future UK Silicon Vertex & Tracker R&D

- Earlier this month, [we got together in Birmingham](#) to scope out what is currently being done in the UK and where we want to go with tracking seeking:
 - Strategic R&D funding
 - Industry support
 - UK leadership
- The (rather large) UK tracker community wants (and needs) to transition into strategic R&D, rather than project driven specific development
 - Retaining expertise
 - Better opportunity for generic IP generation
 - Future proof - we do currently **NOT** know what the next big project is specifically
- All discussion seemed very much in line with the Detector R&D proposal that has been around for a bit

UK Future Silicon R&D Workshop

Workshop Summary

- As a whole the UK wants to work on all aspects of a future tracker/vertexer system, with the goal of being able to deliver, largely unaffected by external inputs
 - Frontend
 - Mechanics/Cooling
 - Services/DAQ
 - Software
- We need to keep this discussion alive!
- General agreement with the idea of pushing for strategic R&D funding to be made available (Remember, neither blue skies, nor project bound)
 - Scope/branching points along a strategic R&D route still need to be firmed up
- Specific directions that we agreed on:
 - 28nm IP developments
 - 3D integration

Questions and Comments

- Do we actually have a consensus behind this approach?
 - Strategic R&D programme *will* be in tension with other projects in the medium term
- Do we agree on the points made in the proposal?
 - Well aware that this was done in a hurry, with limited consultation; other points have come up
 - UK test infrastructure; channelling of grants to mid-career people; link with 'blue skies' R&D
- Is this really a good fit for IF?
 - The 'new standard model' of funding would suggest that R&D lives within the core programme
- Do we have ideas or preferences on what to do next?
- My current thinking
 - Ask STFC (Science Board) to clearly re-state its position on strategic R&D and the funding for it
 - Even if no immediate \$, this could provide backing for UK to begin carving out roles / leadership in DRD collaborations
 - Ensure that (a new) proposal is brought to the attention of Science Board / TAAB (via an Sol?)
 - Although we are not prioritised for IF, this could still move the discussion forward a little
 - Push for inclusion in the STFC Visions Process for consideration in future IF rounds
 - Could be via 'SB route' or the 'National labs route' – either way, it will need prioritisation by advisory panels
 - Note: no money until >2025 via this route, and no certainty even of that – but other routes may open up
 - Begin fleshing out in the community our priorities and potential projects
- But: we have about three months before DRD setup begins in earnest
