LCDA moments of meson

Thursday 1 August 2024 09:40 (20 minutes)

We calculate the leading-twist light-cone distribution amplitude (LCDA) moments of mesons on MILC ensembles using the hyp-smeared clover action. For pseudoscalar mesons, we compute the first moments of the K meson and the second moments of the π and K mesons. For vector mesons, we compute the first moments of the K^* meson and the second moments of the ρ, K^*, and ϕ mesons.
