Renormalisation Group Equations for 2+1 clover Fermions

Friday 2 August 2024 15:15 (20 minutes)

Many simulations now have many lattice spacings available, and it is of interest to investigate how they scale. In this talk we first derive renormalisation group equations appropriate for 2+1 clover fermions. This is then used together with pion mass and Wilson flow data at five lattice spacings to study scaling.
