Preliminary results for the short-distance window contribution to the muon $g-2$

Wednesday, 31 July 2024 11:55 (20 minutes)

In this talk I will present new blinded lattice results for the short-distance window observable of the anomalous muon magnetic moment. Results are obtained on several staggered ensembles covering lattice spacings down to $a \sim 0.048$ fm. I will discuss the details of the continuum extrapolation and of other sources of systematic uncertainties.
