Disconnected contribution to the muon g-2 hadronic vacuum polarization

Thursday, 1 August 2024 09:00 (20 minutes)

We report on the Fermilab-HPQCD-MILC collaboration's effort updating our calculation of the HVP for the muon anomalous magnetic moment. Using physical $N_f=2+1+1$ HISQ ensembles at multiple lattice spacings, we focus on the isospin-symmetric, quark-line-disconnected contribution to the HVP for various windows quantities.
