On the geometric convergence of HMC on Riemannian manifolds

Friday, 2 August 2024 14:55 (20 minutes)

On the geometric convergence of HMC on Riemannian manifolds.

In this presentation we apply Harris' ergodic theorem on Markov chains to prove the geometric convergence of Hamiltonian Monte Carlo: first on compact Riemannian manifolds, and secondly on a large class of non-compact Riemannian manifolds by introducing an extra Metropolis step in the radial direction. We shall use ϕ^4 theory as an explicit example of the latter case.
