Preliminary results for the intermediate-distance window contribution from the BMW collaboration

Tuesday, 30 July 2024 18:15 (1 hour)

In this talk I will present new blinded lattice results for the intermediate-distance window observable of the anomalous muon magnetic moment. Results are obtained on several staggered ensembles covering lattice spacings down to a ~ 0.048 fm. I will discuss the details of the continuum extrapolation and of other sources of systematic uncertainties.
