Extracting the distribution amplitude of light pseudoscalar mesons using the HOPE method

Tuesday, 30 July 2024 17:15 (1 hour)

The pseudoscalar meson light cone distribution amplitudes (LCDAs) are essential non-perturbative inputs for a range of high-energy exclusive processes in quantum chromodynamics. In this poster, progress towards a determination of the second and fourth Mellin moments of pseudoscalar meson LCDAs by the HOPE Collaboration is reported.
