## Hadronic molecules in the single and double charm sector

Wednesday, 3 July 2024 11:40 (30 minutes)

After a brief introduction to the concept of hadronic molecules I will explain which kinds of observables are sensitive to a molecular component and which are not. The ideas will then be applied to properties of the X(3872), data for the Y(4230) and finally to the lowest lying positive parity open charm mesons.
