

Astrophysics and Particle Physics with High-Energy Neutrino Telescopes

Thursday 24 July 2025 14:00 (30 minutes)

I'll summarize the status of high-energy neutrino physics, including the role that IceCube and other telescopes play in the domains of astrophysics (cosmic ray acceleration, sources) and fundamental physics (neutrino oscillation parameters, dark matter searches, and other probes of physics beyond the Standard Model).

Presenter: HOOPER, Dan

Session Classification: Plenary session
