# EDMS - Technical Issues

- Note that the URL <http://ilc-edms.desy.de> now redirects to

<https://ilc-edms.desy.de:444/TC70ILC/controller/home>

- You may need to open port 444 in your Firewall
- Firefox does not display all of the buttons required to submit a document into EDMS.

# Current Structure in EDMS

nb=named baseline

# Thoughts on Future Use

- The main power of EDMS is realised when working on large collaborative documents (minimal machine specification, etc)
- Can also be a persistent archive for presentations, conference proceedings, etc.
- Offers better classification and relationship tools than a web page, but lacks immediacy.
- Cannot replace group web page (<http://www.ippp.dur.ac.uk/LCsources>)
