Lattice QCD study of heavy-heavy-light-light tetraquark candidates

Monday, July 25, 2016 3:35 PM (20 minutes)

We study $\bar{b}b\bar{u}d$ and $\bar{b}b\bar{u}\bar{d}$ four-quark systems using lattice QCD. The heavy b quarks are treated either in the static approximation or by using NRQCD. Both for $\bar{b}b\bar{u}d$ (quantum numbers $I(J^P) = 0(1^+)$) and for $\bar{b}b\bar{u}\bar{d}$ (quantum numbers of Z_b , $I(J^P) = 1(1^+)$) our results indicate the existence of a four-quark bound state, i.e. a tetraquark.
