Tensor networks

Tuesday, July 26, 2016 10:15 AM (30 minutes)

In this talk, I will review the recent progress of tensor network approaches; Hamiltonian/Hilbert-space approach and Lagrangian/path-integral approach, whose striking feature is free of the sign problem.

As examples, I will show some results of CP(N-1) model including theta-term and other models.

Finally, I will address outstanding problems and discuss future prospects.
