# Outline

Introduction

Library Features

Progress Report

Summary & Outlook

# Adaptive Algebraic Multigrid Approach

Two-grid error propagator for  $\nu$  steps of post-smoothing

$$E_{2g}^{(\nu)} = \underbrace{(1 - MD)^\nu}_{\text{smoother}} \underbrace{(1 - PD_c^{-1}P^\dagger D)}_{\text{coarse grid correction}}, \underbrace{D_c := P^\dagger DP}_{\text{coarse operator}}$$

- ▶ low accuracy for  $D_c^{-1}$  and  $M$  is sufficient
- ▶ allows for introducing recursive construction for  $D_c$

**To Do:** Define interpolation  $P$  and smoother  $M$

## DD- $\alpha$ AMG

$M$ : Schwarz Alternating Procedure (SAP)

[Hermann Schwarz 1870; Martin Lüscher 2003]

$P$ : Aggregation Based Interpolation

[Brannick, Clark et al. 2010]

# The Algebraic Multigrid Principle

**Smoother:**  $1 - MD$

- ▶ effective on “large” eigenvectors
- ▶ “small” eigenvectors remain

$$Dv_i = \lambda_i v_i \quad \text{with} \quad |\lambda_1| \leq \dots \leq |\lambda_{3072}|$$

# Aggregation Based Interpolation

## Construction

- define aggregates: domain decomposition  $\mathcal{A}_1, \dots, \mathcal{A}_s$

- calculate test vectors  $w_1, \dots, w_N$
- decompose test vectors over aggregates  $\mathcal{A}_1, \dots, \mathcal{A}_s$

$$(w_1, \dots, w_N) = \begin{array}{c} \text{|||||} \\ \text{|||||} \\ \text{|||||} \\ \text{|||||} \\ \text{|||||} \\ \text{|||||} \\ \text{|||||} \\ \text{|||||} \end{array} = \begin{array}{c} \mathcal{A}_1 \\ \mathcal{A}_2 \\ \vdots \\ \mathcal{A}_s \end{array} \rightarrow P = \begin{pmatrix} \mathcal{A}_1 & & & \\ & \mathcal{A}_2 & & \\ & & \ddots & \\ & & & \mathcal{A}_s \end{pmatrix}$$

# The Algebraic Multigrid Principle

**Coarse-grid correction:**  $1 - PD_c^{-1}P^\dagger D$

- ▶ **small eigenvectors**  $w_1, \dots, w_N$  built into interpolation  $P$   
 $\Rightarrow$  effective on **small eigenvectors**

$$Dv_i = \lambda_i v_i \quad \text{with} \quad |\lambda_1| \leq \dots \leq |\lambda_{3072}|$$

# The Algebraic Multigrid Principle

**Coarse-grid correction:**  $1 - PD_c^{-1}P^\dagger D$

- ▶ **small eigenvectors**  $w_1, \dots, w_N$  built into interpolation  $P$   
 $\Rightarrow$  effective on **small eigenvectors**

$$Dv_i = \lambda_i v_i \quad \text{with} \quad |\lambda_1| \leq \dots \leq |\lambda_{3072}|$$

# The Algebraic Multigrid Principle

**Two-grid method:**  $E_{2g} = (1 - MD)(1 - PD_c^{-1}P^\dagger D)$

- ▶ complementarity of smoother and coarse-grid correction
- ▶ effective on **all eigenvectors!**

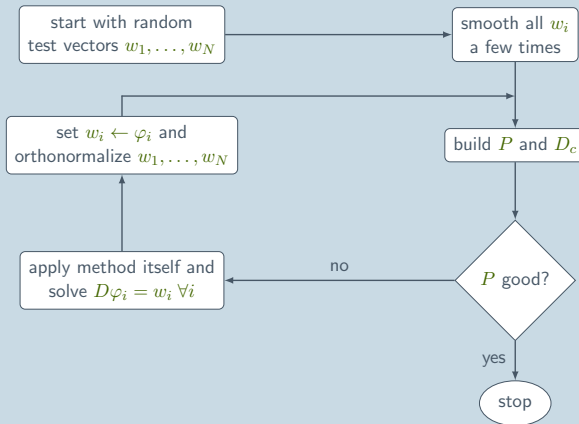

$$Dv_i = \lambda_i v_i \quad \text{with} \quad |\lambda_1| \leq \dots \leq |\lambda_{3072}|$$

# Adaptive Setup: How to Obtain Information about Small Eigenvectors

## Inverse iteration with the method itself

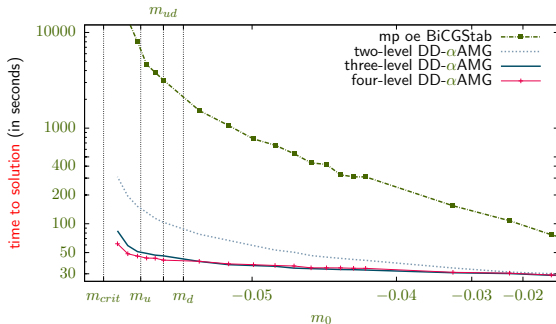

add recurrence scheme  $\rightarrow$  multilevel setup

# Performance and Setup Costs

BMW-c cnfg, 3HEX-smearcd  $64 \times 64^3$ , 128 cores

# The DD- $\alpha$ AMG Solver Library

available on [github.com/DDalphaAMG](https://github.com/DDalphaAMG)

## Technical Features

- ▶ C-code
- ▶ MPI + OpenMP
- ▶ SSE intrinsics
- ▶ library interface
- ▶ integrated profiling
- ▶ small parameter set for users
- ▶ large parameter set for developers
- ▶ debug information
- ▶ GNU GPL

## Code Features

- ▶ Wilson+Clover
- ▶ AMG with arbitrary number of levels
- ▶ idling processes
- ▶ different smoothers: SAP, additive Schwarz, GMRES
- ▶ reference methods: BiCGStab, CGN, GMRES
- ▶ mixed precision, odd-even preconditioned

# The DD- $\alpha$ AMG Library Interface

available on [github.com/DDalphaAMG](https://github.com/DDalphaAMG)

## Interface Features

- ▶ conversion routines for configurations and vectors
- ▶ setup routine (initial setup)
- ▶ configuration update routine ( $\rightarrow$  HMC)
- ▶ setup update routine ( $\rightarrow$  HMC)
- ▶ mass update routines ( $\rightarrow$  Hasenbusch trick)
- ▶ solver routine (inversion for 1 RHS)
- ▶ GNU GPL  $\rightarrow$  feel free to adjust it to your needs

# Progress Report: Existing Branches

## DD- $\alpha$ AMG for KNC/KNL

- ▶ SAP smoother implemented from scratch
- ▶ coarse grid correction from DD- $\alpha$ AMG
- ▶ DD- $\alpha$ AMG inherited SIMD vectorization from KNC-code

S. Heybrock, D. Richtmann, P. Georg, T. Wettig, R.

→ arXiv:1512.04506,1601.03184

## DD- $\alpha$ AMG for twisted mass fermions

- ▶ the interpolation  $P$  in DD- $\alpha$ AMG respects  $\gamma_5 P = P \gamma_5^c$   
 $\implies D + i\mu\gamma_5 \rightsquigarrow D_c + i\mu\gamma_5^c$

S. Bacchio, J. Finkenrath, C. Alexandrou, A. Frommer, K. Kahl, R.

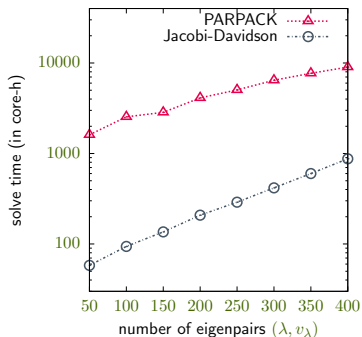

→ Talk by S. Bacchio

# Progress Report: Future Branch – Eigensolver for $\gamma_5 D$

$48 \times 24^3$  CLS cnfg,  $m_\pi \approx 290$  MeV

- ▶ Jacobi-Davidson with a multigrid solver
- ▶ outperforms PARPACK for 400 eigenpairs
- ▶ improved scaling with lattice volume

A. Strebel, J. Simeth, G. Bali, S. Collins, A. Frommer, K. Kahl, I. Kanamori,  
B. Müller, R.

→ [arXiv:1509.06865](https://arxiv.org/abs/1509.06865)

# Outlook

- ▶ eigensolver: improve algorithm (clever restart strategies, etc.)  
 ⇒ publication

- ▶ overlap solver: prepare code for publication  
 J. Brannick, A. Frommer, K. Kahl, B. Leder, A. Strebler, R.  
 → arXiv:1410.7170

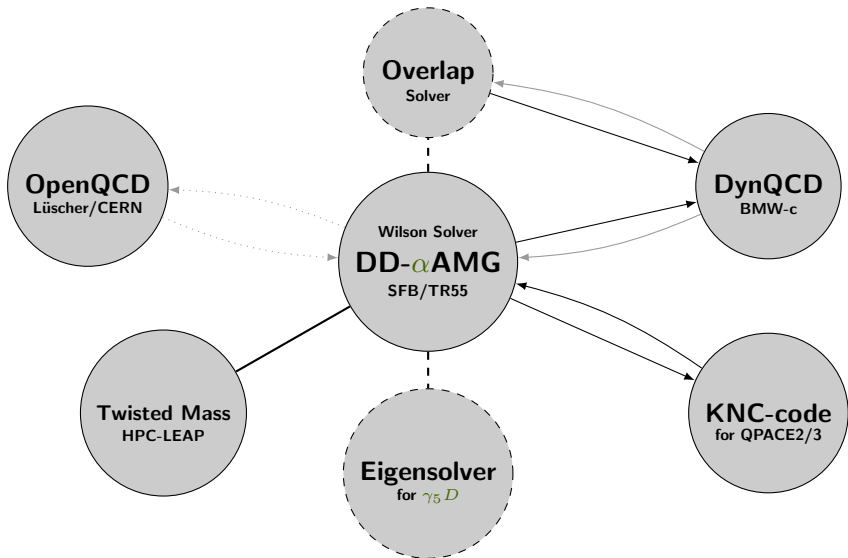

- ▶ vectorization: generalization, integrate AVX
