Momentum smearing

Tuesday, July 26, 2016 8:00 PM (1 hour)

Hadrons in lattice QCD are usually created employing smeared interpolators.

We introduce a new quark smearing that allows us to maintain small statistical errors and good overlaps of hadronic wavefunctions with the respective ground states, also at high spatial momenta. We test this method for various physical observables see also arXiv:1602.05525v2 [hep-lat].
