## **dark matter from one-flavor SU(2) gauge theory**

*Wednesday, July 27, 2016 11:50 AM (20 minutes)*

SU(2) gauge theory with a single fermion in the fundamental representation is a minimal non-Abelian candidate for the dark sector. Having only a single flavor provides a natural mechanism for stabilizing dark matter on cosmological timescales. Preliminary lattice results will be presented and discussed in the context of dark matter phenomenology.
