## Lines of Constant Physics in a 5-d Gauge-Higgs Unification Scenario

*Thursday, July 28, 2016 2:40 PM (20 minutes)*

We report on the progress in the study of a five-dimensional  $SU(2)$  Gauge-Higgs Unification model. In the non-perturbative study, the Higgs mechanism is triggered by the spontaneous breaking of a global symmetry. In the same region of the phase diagram, we observe both dimensional reduction and the ratio of Higgs and Z boson masses to take the value known from experiment.

We present the first results on the construction of a line of constant physics in this region, including the prediction for the mass scale of the first excited states of the Higgs and gauge bosons.
