We note with sadness the passing of Michael Müller Preußker of the Humboldt University in Berlin.

He made numerous important contributions to the non-perturbative analysis of Quantum Field Theories, particularly to our understanding of the QCD vacuum, the topological structure of gauge theories and the phase transition from hadronic matter to the quark gluon plasma.

The XII Conference on Quark Confinement and the Hadron Spectrum will be dedicated to his memory (Thessaloniki, 29/8-3/9 2016).
