Open charm correlators and spectral functions at high temperature

Thursday, July 28, 2016 2:00 PM (20 minutes)

We present results for correlators and spectral functions of open charm mesons using 2+1 flavours of clover fermions on anisotropic lattices. The D mesons are found to melt close to the deconfinement crossover temperature T_c . Our preliminary results suggest a shift in the thermal D meson mass below T_c .
