A high-statistics lattice QCD study of nucleon sigma terms

Thursday, 28 July 2016 14:20 (20)

For the Budapest-Marseille-Wuppertal collaboration

We present a lattice study of the u, d and s quark contents of the nucleon, determined using the Feynman-Hellmann theorem. Results are obtained from twenty-nine high-statistics simulations with four flavors of O(a)-improved Wilson quarks, four lattice spacings and a variety of quark masses.
