Volume reduction through perturbative Wilson loops

Wednesday, July 27, 2016 11:30 AM (20 minutes)

We derive the perturbative expansion of Wilson loops to order g^4 in a $SU(N)$ lattice gauge theory with twisted boundary conditions. Our expressions show that the thermodynamic limit is attained at infinite N for any number of lattice sites and allow to quantify the deviations from volume independence at finite large N as a function of the twist. The effect of adjoint Wilson fermions will be briefly described.
