Results on the heavy-dense QCD phase diagram using complex Langevin

Tuesday, July 26, 2016 2:00 PM (20 minutes)

Complex Langevin simulations have been able to successfully reproduce results from Monte Carlo methods in the region where the sign problem is mild and make predictions when it is exponentially hard. We present here our study of the QCD phase diagram in the limit of heavy and dense quarks (HDQCD) for 3 different lattice volumes and the boundary between the hadronic phase and the quark-gluon plasma. We also briefly discuss instabilities encountered in our simulations.
