## Double copy of classical bremsstrahlung solutions

Friday, 15 January 2016 11:10 (25 minutes)

The BCJ double copy relates scattering amplitudes of gauge and gravity theories. In an attempt to study this duality in a non-perturbative context, it was recently found that Kerr-Schild solutions in general relativity are somehow a double copy of linearised Yang-Mills solutions. In this talk I apply the solutions double copy procedure to bremsstrahlung systems and explain its relation to the scattering amplitudes double copy.
